COMMON SEO ISSUES	
Meta Title Test	<p>✓ The meta title of your page has a length of 63 characters. Most search engines will truncate meta titles to 70 characters.</p> <hr style="border: 0; border-top: 1px solid #ccc; margin: 5px 0;"/> <p>→ Chandigarh Escorts Club 24*7 Available Call Girls In Chandigarh</p>
Meta Description Test	<p>✓ The meta description of your page has a length of 152 characters. Most search engines will truncate meta descriptions to 160 characters.</p> <hr style="border: 0; border-top: 1px solid #ccc; margin: 5px 0;"/> <p>→ 9815264979 Chandigarh Escorts Agency Is Chandigarh's Most Famous Chandigarh Escorts Call Girls Agency We are Available 24/7 To Make Your Sexual Demands.</p>
Google Search Results Preview Test	<p>ⓘ Chandigarh Escorts Club 24*7 Available Call Girls In Chandigarh https://callgirlsinchandigarh.club 9815264979 Chandigarh Escorts Agency Is Chandigarh's Most Famous Chandigarh Escorts Call Girls Agency We are Available 24/7 To Make Your Sexual Demands.</p>
Most Common Keywords Test	<p>ⓘ There is likely no optimal keyword density (search engine algorithms have evolved beyond keyword density metrics as a significant ranking factor). It can be useful, however, to note which keywords appear most often on your page and if they reflect the intended topic of your page. More importantly, the keywords on your page should appear within natural sounding and grammatically correct copy.</p> <hr style="border: 0; border-top: 1px solid #ccc; margin: 5px 0;"/> <p>→ chandigarh - 79 times → escorts - 49 times → girls - 39 times → escort - 25 times → love - 21 times</p>
Keywords Usage Test	<p>✓ Congratulations! You are using your keywords in your meta-tags, which help search engines to properly identify the topic of your page.</p> <hr style="border: 0; border-top: 1px solid #ccc; margin: 5px 0;"/> <p>→ Keyword(s) included in Title tag → Keyword(s) included in Meta-Description tag</p>

<p>Keywords Cloud Test</p>	<p>  acts adult agency appreciate away babes babies best body business callgirlsinchandigarh chandigarh choice choose class club college come company contact customer customers desires different divas enjoy erotic escort escorts exchange experience extreme extremely facilities feel forget girl girls going guarantee hand high hire hottest housewife independent just kind know known life like love lovemaking loving make making massage meet model models naughty need night nights partner people perfect person place pleasure point positions providing quality ready request respective respectively right satisfaction satisfy sensual service services session sexual sexy tell time true trustworthy type want webpage website welcome women wonderful work </p>
<p>Heading Tags Test</p>	<p>  Congratulations! Your webpage contains headings tags. </p> <hr/> <p>H1 headings</p> <hr/> <p>→ Horny Call Girls in Chandigarh - Make Your Nights Passionate</p> <hr/> <p>H2 headings</p> <hr/> <p>→ Be Seduced by the Dazzling Chandigarh Call Girls</p>
<p>Robots.txt Test</p>	<p>  Congratulations! Your site uses a "robots.txt" file: https://callgirlsinchandigarh.club/robots.txt </p>
<p>Sitemap Test</p>	<p>  Congratulations! Your website has a sitemap file. → https://callgirlsinchandigarh.club/sitemap.xml </p>
<p>SEO Friendly URL Test</p>	<p>  Congratulations! All links from your webpage are SEO friendly. </p>
<p>Image Alt Test</p>	<p>  All of your webpage's "img" tags have the required "alt" attribute. </p>

<p>Inline CSS Test</p>	<p> Your webpage is using inline CSS styles!</p> <hr/> <p>HOW TO FIX</p> <p>It is a good practice to move all the inline CSS rules into an external file in order to make your page "lighter" in weight and decrease the code to text ratio.</p> <ul style="list-style-type: none"> • check the HTML code of your page and identify all style attributes • for each style attribute found you must properly move all declarations in the external CSS file and remove the style attribute <p>For example:</p> <pre data-bbox="427 479 1522 790"> <!--this HTML code with inline CSS rule:--> <p style="color:red; font-size: 12px">some text here</p> <!--would became:--> <p>some text here</p> <!--and the rule added into your CSS file:--> p{color:red; font-size: 12px} </pre>
<p>Deprecated HTML Tags Test</p>	<p> Congratulations! Your page does not use HTML deprecated tags.</p>
<p>Google Analytics Test</p>	<p> Congratulations! Your webpage is using Google Analytics.</p>
<p>Favicon Test</p>	<p> Congratulations! Your website appears to have a favicon. </p>
<p>JS Error Test</p>	<p> Congratulations! There are no severe JavaScript errors on your webpage.</p>
<p>Social Media Test</p>	<p> Congratulations! Your website is connected successfully with social media using: Twitter</p>

SPEED OPTIMIZATIONS	
<p>HTML Page Size Test</p>	<p> Congratulations! The size of your webpage's HTML is 11.79 Kb and is under the average webpage's HTML size of 33 Kb. Faster loading websites result in a better user experience, higher conversion rates, and generally better search engine rankings.</p>
<p>HTML Compression/GZIP Test</p>	<p> Congratulations! Your webpage is successfully compressed using gzip compression on your code. Your HTML is compressed from 74.16 Kb to 11.79 Kb (84% size savings). This helps ensure a faster loading webpage and improved user experience.</p>
<p>Site Loading Speed Test</p>	<p> Your website loading time is around 3.61 seconds and this is under the average loading speed which is 5 seconds.</p>

Page Objects Test	 Your page uses more than 20 http requests , which can slow down page loading and negatively impact user experience. <hr/> HTML Pages: 2; CSS Files: 2; Scripts: 6; Images: 33; Flash Files: 0;
Page Cache Test (Server Side Caching)	 Congratulations, you have a caching mechanism on your website. Caching helps speed page loading times as well as reduces server load.
Flash Test	 Congratulations! Your website does not include flash objects (an outdated technology that was sometimes used to deliver rich multimedia content). Flash content does not work well on mobile devices, and is difficult for crawlers to interpret.
CDN Usage Test	 Your webpage is not serving all resources (images, javascript and css) from CDNs. <hr/> HOW TO FIX In order to pass this test you are advised to use a CDN service. A Content Delivery Network (CDN) is a globally distributed network of web servers that allows a quick transfer of assets and provides high availability and high performance. The primary benefits of using a CDN service are: <ul style="list-style-type: none"> • Improving website loading times • Reducing bandwidth costs • Increasing content availability and redundancy • Improving website security
Image Caching Test	 Congratulations! Your website is using cache headers for your images and the browsers will display these images from the cache.
JavaScript Caching Test	 Congratulations! Your website is using cache headers for all JavaScript resources.
CSS Caching Test	 Congratulations! Your website is using cache headers for all CSS resources.
JavaScript Minification Test	 Congratulations! Your website's JavaScript files are minified!
CSS Minification Test	 Congratulations! Your webpage's CSS resources are minified.
Nested Tables Test	 Congratulations, your page does not use nested tables. This speeds up page loading time and optimizes the user experience.
Frameset Test	 Congratulations! Your webpage does not use frames.
Doctype Test	 Congratulations! Your website has a doctype declaration: <hr/> → <code><!DOCTYPE html></code>
URL Redirects Test	 Congratulations! Your URL doesn't have any redirects (which could potentially cause site indexation issues and site loading delays).

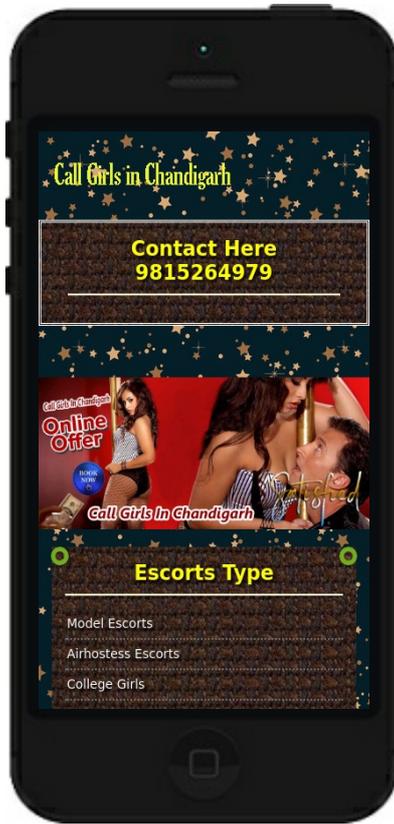

SERVER AND SECURITY

URL Canonicalization Test	 https://callgirlsinchandigarh.club and https://www.callgirlsinchandigarh.club resolve to the same URL.
HTTPS Test	 Your website is successfully using HTTPS, a secure communication protocol over the Internet. <hr/> <p>→ Security state: secure</p> <hr/> <p>→ Certificate issuer: Go Daddy Secure Certificate Authority - G2</p> <hr/> <p>→ Valid until: Jan 12, 2022</p>
Safe Browsing Test	 This site is not currently listed as suspicious (no malware or phishing activity found).
Server Signature Test	 Congratulations, your server signature is off.
Directory Browsing Test	 Congratulations! Your server has disabled directory browsing.
Plaintext Emails Test	 Congratulations! Your webpage does not include email addresses in plaintext.

MOBILE USABILITY

Media Query Responsive Test	 Congratulations, your website uses media query technique, which is the base for responsive design functionalities.

ADVANCED SEO

**Structured Data
Test**

✓ Congratulations! Your website is using HTML Microdata specifications in order to markup structured data.

<p>Custom 404 Error Page Test</p>	<p>✘ Your website is not using a custom 404 error page. Default 404 error pages result in a poor experience - it can mislead users into thinking an entire site is down or broken, greatly increases the chance they leave your site entirely, and looks unprofessional. By creating a custom 404 error page, you can improve your website's user experience by letting users know that only a specific page is missing/broken (and not your entire site), providing them helpful links, the opportunity to report bugs, and potentially track the source of broken links in your site.</p> <hr/> <p>HOW TO FIX</p> <p>Creating a custom 404 error page can be relatively simple or more complicated, depending on what technologies were used to build your website (your web server, framework used, etc). Learn more about the basics of creating a custom 404 error page.</p> <p>On your custom error page, you should provide relevant information to keep the user's attention so they remain on your website. Some steps to achieve this goal include:</p> <ul style="list-style-type: none"> • Adding links to your most important pages (your best articles/articles/content, latest posts, etc.) • If you have an e-commerce business, you can display special offers, product recommendations, discounts, etc. • Include a search box or a sitemap link to help users find the information they wanted. • Use simple language (non-technical) to explain what went wrong. • Add a contact form or provide an email address to allow users to get in touch with you for further help. <p>You can also use your custom 404 error page to track the source of broken links in your site.</p>
<p>Noindex Tag Test</p>	<p>✔ Your webpage does not use the noindex meta tag. This means that your webpage will be read and indexed by search engines.</p>
<p>Canonical Tag Test</p>	<p>✔ Your webpage is using the canonical link tag. This tag specifies that the URL: https://callgirlsinchandigarh.club is preferred to be used in search results. Please ensure that this specification is correct, as canonical tags are often hard-coded and may not always reflect the latest changes in a site's URL structure.</p> <hr/> <p>→ <code><link href="https://callgirlsinchandigarh.club" rel="canonical"/></code></p>
<p>Nofollow Tag Test</p>	<p>✔ Your webpage does not use the nofollow meta tag. This means that search engines will crawl all links from your webpage.</p>
<p>Disallow Directive Test</p>	<p>✔ Your robots.txt file disallow the search engines access to some parts of your website. You are advised to check carefully if the access to these resources or pages must be blocked.</p> <hr/> <p>→ Disallow: /</p>

SPF Records Test

- ✘ Your DNS server is not using an SPF record. SPF (Sender Policy Framework) allows administrators to specify which hosts are allowed to send mail from a given domain by creating a specific SPF record or TXT record in the Domain Name System (DNS). You can find more information about SPF records [here](#).

HOW TO FIX

An **SPF record** is a type of **Domain Name Service (DNS)** record that allows email systems to check if the sender of a message comes from a legitimate source and refuse an email if the source is not legitimate. Adding an SPF record is as easy as adding CNAME, MX or A records in your DNS zone. You can find more information [here](#).

Before creating the SPF record for your domain, it is important to have access at your domain's DNS zone and to know what mail servers your domain is likely to use and plan how you want any non-authorized email to be handled.

Example:

Let's say that you are planning to send emails using Google Apps and you also want to ensure that no other mail servers are authorized. You can use an SPF record like this:

```
v=spf1 include:_spf.google.com -all
```

"**v=spf1**" - This sets the SPF version

"**include:_spf.google.com**" - This includes Google mail servers in your list of authorized sending servers

"**-all**" - This means that any server not previously listed is not authorized

If you are using your own VPS to send email and not any other service like Mandrill, Google Apps, etc. then you can create an SPF record like this:

```
v=spf1 mx -all
```

Note:

Setting an SPF record for your domain can help in reducing the chances of a spammer using your domain name in unsolicited emails. Research carefully what mail servers your domain is likely to use and plan how you want any non-authorized email to be handled.
