WARNINGS

COMMON SEO ISSUES	
<b>Meta Title Test</b>	<p>✓ The meta title of your page has a length of 47 characters. Most search engines will truncate meta titles to 70 characters.</p> <hr style="border: 0; border-top: 1px solid #ccc; margin: 5px 0;"/> <p>→ Chandigarh Escorts Service   Chandigarh Escorts</p>
<b>Meta Description Test</b>	<p>✓ The meta description of your page has a length of 164 characters. Most search engines will truncate meta descriptions to 160 characters.</p> <hr style="border: 0; border-top: 1px solid #ccc; margin: 5px 0;"/> <p>→ Erotic, High Class and Elite Private Adult Escort Services in Chandigarh. our Agency offers elite and first class escort services to make your nightmares a reality.</p>
<b>Google Search Results Preview Test</b>	<p>ⓘ <a href="http://www.escortserviceschandigarh.com">Chandigarh Escorts Service   Chandigarh Escorts</a> <a href="http://www.escortserviceschandigarh.com">http://www.escortserviceschandigarh.com</a> Erotic, High Class and Elite Private Adult Escort Services in Chandigarh. our Agency offers elite and first class escort services to make your nightmares a reality.</p>
<b>Most Common Keywords Test</b>	<p>ⓘ There is likely no optimal keyword density (search engine algorithms have evolved beyond keyword density metrics as a significant ranking factor). It can be useful, however, to note which keywords appear most often on your page and if they reflect the intended topic of your page. More importantly, the keywords on your page should appear within natural sounding and grammatically correct copy.</p> <hr style="border: 0; border-top: 1px solid #ccc; margin: 5px 0;"/> <p>→ escorts - 11 times → life - 9 times → girls - 8 times → chandigarh - 7 times → people - 7 times</p>
<b>Keywords Usage Test</b>	<p>✓ Congratulations! You are using your keywords in your meta-tags, which help search engines to properly identify the topic of your page.</p> <hr style="border: 0; border-top: 1px solid #ccc; margin: 5px 0;"/> <p>→ Keyword(s) included in Title tag → Keyword(s) included in Meta-Description tag</p>

<p><b>Keywords Cloud Test</b></p>	<p>ⓘ affair agencies attractive available beautiful beauty believe best body chandigarh city classes clients committed confused conscious contact Crazy date days demands desire enjoy entertainment escort escorts exchange expert extra faces fair faithful fantastic female figure friendly fulfill gallery getting girl girls gives happy health hire home hottest hours imagine independent joyfully just keeping life like links living love makes malhotra married meeting memorable minded miss models moments need open partner partners people place problems professional provide rate really relationship relax sadness satisfy self service services sexy shape short society specialist stunning tanvi thing think time unique want waste wonderful yoga</p>
<p><b>Heading Tags Test</b></p>	<p>✓ Congratulations! Your webpage contains headings tags.</p> <hr/> <p><b>H1 headings</b></p> <hr/> <p>→ Beautiful Girls Can Fulfill All Your Crazy Demands</p> <hr/> <p><b>H2 headings</b></p> <hr/> <p>→ Perfect Chandigarh Female Escorts</p>
<p><b>Robots.txt Test</b></p>	<p>✓ Congratulations! Your site uses a "robots.txt" file:  <a href="http://www.escortserviceschandigarh.com/robots.txt">http://www.escortserviceschandigarh.com/robots.txt</a></p>
<p><b>Sitemap Test</b></p>	<p>✓ Congratulations! Your website has a sitemap file.</p> <hr/> <p>→ <a href="http://www.escortserviceschandigarh.com/sitemap.xml">http://www.escortserviceschandigarh.com/sitemap.xml</a></p>
<p><b>SEO Friendly URL Test</b></p>	<p>✓ Congratulations! All links from your webpage are SEO friendly.</p>
<p><b>Image Alt Test</b></p>	<p>✓ All of your webpage's "img" tags have the required "alt" attribute.</p>

<b>Inline CSS Test</b>	<p>✘ Your webpage is using inline CSS styles!</p> <hr/> <p><b>HOW TO FIX</b></p> <p>It is a good practice to move all the inline CSS rules into an external file in order to make your page "lighter" in weight and decrease the code to text ratio.</p> <ul style="list-style-type: none"> <li>• check the HTML code of your page and identify all style attributes</li> <li>• for each style attribute found you must properly move all declarations in the external CSS file and remove the style attribute</li> </ul> <p><b>For example:</b></p> <pre style="background-color: #f9f9f9; padding: 10px; border: 1px solid #ccc;"> &lt;!--this HTML code with inline CSS rule:--&gt; &lt;p style="color:red; font-size: 12px"&gt;some text here&lt;/p&gt;  &lt;!--would became:--&gt; &lt;p&gt;some text here&lt;/p&gt;  &lt;!--and the rule added into your CSS file:--&gt; p{color:red; font-size: 12px} </pre>
<b>Deprecated HTML Tags Test</b>	<p>✔ Congratulations! Your page does not use HTML deprecated tags.</p>
<b>Google Analytics Test</b>	<p>✔ Congratulations! Your webpage is using Google Analytics.</p>
<b>Favicon Test</b>	<p>✔ Congratulations! Your website appears to have a favicon. <input type="text"/></p>
<b>JS Error Test</b>	<p>✔ Congratulations! There are no severe JavaScript errors on your webpage.</p>
<b>Social Media Test</b>	<p>✔ Congratulations! Your website is connected successfully with social media using: <a href="#">Facebook</a> <a href="#">Twitter</a></p>

SPEED OPTIMIZATIONS	
<b>HTML Page Size Test</b>	<p>✔ Congratulations! The size of your webpage's HTML is <b>3.57 Kb</b> and is under the average webpage's HTML size of <b>33 Kb</b>. Faster loading websites result in a better user experience, higher conversion rates, and generally better search engine rankings.</p>
<b>HTML Compression/GZIP Test</b>	<p>✔ Congratulations! Your webpage is successfully compressed using <b>gzip compression</b> on your code. Your HTML is compressed from <b>8.38 Kb</b> to <b>3.57 Kb (57% size savings)</b>. This helps ensure a faster loading webpage and improved user experience.</p>
<b>Site Loading Speed Test</b>	<p>✔ Your website loading time is around <b>0.78 seconds</b> and this is under the average loading speed which is <b>5 seconds</b>.</p>

<b>Page Objects Test</b>	<p>✔ Congratulations, your page has fewer than <b>20 http requests</b>. A higher number of http requests results in a user's browser needing to request a large number of objects from your server, which will ultimately slow down the loading of your web page.</p> <hr/> <p>HTML Pages: 1; CSS Files: 3; Scripts: 3; Images: 11; Flash Files: 0;</p>
<b>Page Cache Test (Server Side Caching)</b>	<p>✔ Congratulations, you have a caching mechanism on your website. <a href="#">Caching</a> helps speed page loading times as well as reduces server load.</p>
<b>Flash Test</b>	<p>✔ Congratulations! Your website does not include flash objects (an outdated technology that was sometimes used to deliver rich multimedia content). Flash content does not work well on mobile devices, and is difficult for crawlers to interpret.</p>
<b>CDN Usage Test</b>	<p>⚠ Your webpage is not serving all resources (images, javascript and css) from CDNs.</p> <hr/> <p><b>HOW TO FIX</b></p> <p>In order to pass this test you are advised to use a CDN service. A Content Delivery Network (CDN) is a globally distributed network of web servers that allows a quick transfer of assets and provides high availability and high performance. The primary benefits of using a CDN service are:</p> <ul style="list-style-type: none"> <li>• Improving website loading times</li> <li>• Reducing bandwidth costs</li> <li>• Increasing content availability and redundancy</li> <li>• Improving website security</li> </ul>
<b>Image Caching Test</b>	<p>✔ Congratulations! Your website is using cache headers for your images and the browsers will display these images from the cache.</p>
<b>JavaScript Caching Test</b>	<p>✔ Congratulations! Your website is using cache headers for all JavaScript resources.</p>
<b>CSS Caching Test</b>	<p>✔ Congratulations! Your website is using cache headers for all CSS resources.</p>
<b>JavaScript Minification Test</b>	<p>✔ Congratulations! Your website's JavaScript files are minified!</p>
<b>CSS Minification Test</b>	<p>✘ Some of your webpage's CSS resources are not minified.</p> <hr/> <p><b>HOW TO FIX</b></p> <p>In order to pass this test you must minify all of your external CSS files. For this task you can use an online CSS minifier like <a href="#">YUI Compressor</a> or <a href="#">cssmin.js</a>.</p>
<b>Nested Tables Test</b>	<p>✔ Congratulations, your page does not use nested tables. This speeds up page loading time and optimizes the user experience.</p>
<b>Frameset Test</b>	<p>✔ Congratulations! Your webpage does not use frames.</p>
<b>Doctype Test</b>	<p>✔ Congratulations! Your website has a doctype declaration:</p> <hr/> <p>→ &lt;!DOCTYPE html&gt;</p>

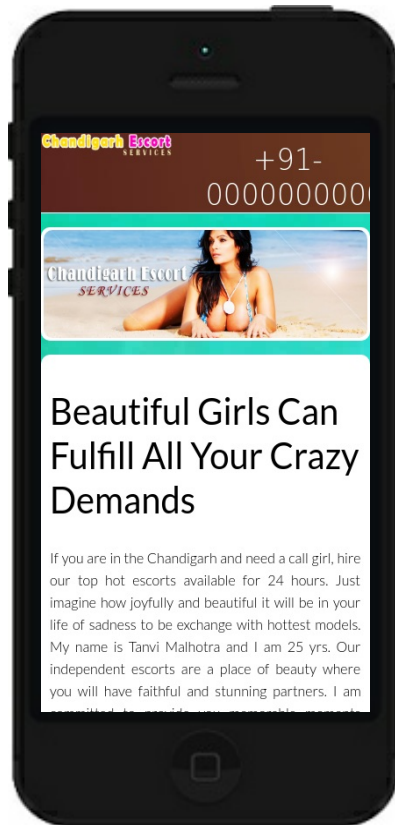

<b>URL Redirects Test</b>	 Congratulations! Your URL doesn't have any redirects (which could potentially cause site indexation issues and site loading delays).
---------------------------	--

SERVER AND SECURITY

<b>URL Canonicalization Test</b>	 <a href="http://www.escortserviceschandigarh.com">http://www.escortserviceschandigarh.com</a> and <a href="http://escortserviceschandigarh.com">http://escortserviceschandigarh.com</a> resolve to the same URL.
<b>HTTPS Test</b>	 Your website is not using https, a secure communication protocol. Even for sites that do not collect sensitive customer information, search engines suggest that <a href="#">switching to https is an increasingly good idea and may help improve rankings</a> . <hr/> <p><b>HOW TO FIX</b></p> <p>If your website needs a secured authentication or an encrypted transfer of data, you need to install an SSL certificate in order to provide a secure connection over HTTPS protocol. <a href="#">HERE</a> is a "step by step" guide to purchase and install an SSL certificate.</p>
<b>Safe Browsing Test</b>	 This site is not currently listed as suspicious (no malware or phishing activity found).
<b>Server Signature Test</b>	 Your server signature is on. Turning off your server signature is generally a good idea from a security standpoint. Read more on how to <a href="#">turn off server signature</a> and <a href="#">improve your website's security</a> . <hr/> <p>→ Server: Apache/2.4.39 (cPanel) OpenSSL/1.0.2r mod_bwlimited/1.4 Phusion_Passenger/5.3.7</p> <hr/> <p><b>HOW TO FIX</b></p> <p>By default, the Apache webserver sends HTTP headers with some information about your server version, operating system, modules installed, etc. These informations can be used by hackers in order to exploit vulnerabilities (specially if you are running an older version). These information can be hidden or changed with very basic configurations.</p> <p>Open Apache's configuration file (<b>httpd.conf</b> or <b>apache.conf</b>) and search for <b>ServerSignature</b>. If you find it, edit it to:</p> <pre>ServerSignature Off ServerTokens Prod</pre> <p>If you don't find it, just add these two lines at the end of the file.</p> <p>Note that, after you modify the configuration file, you must restart the Apache server.</p>
<b>Directory Browsing Test</b>	 Congratulations! Your server has disabled directory browsing.
<b>Plaintext Emails Test</b>	 Congratulations! Your webpage does not include email addresses in plaintext.

**Media Query Responsive Test**

✔ Congratulations, your website uses media query technique, which is the base for responsive design functionalities.

**Mobile Snapshot Test****Structured Data Test**

✘ Your webpage doesn't take the advantages of HTML Microdata specifications in order to markup structured data. View Google's guide for [getting started with microdata](#).

**HOW TO FIX**

HTML5 Microdata is an easy way to add semantic markup to your web pages. Search engines rely on this markup to improve the display of search results, making it easier for people to find the right web pages.

Here is a simple example of how to use HTML5 microdata in your contact web page:

```
<div itemscope itemtype="http://schema.org/Person">
  <span itemprop="name">Joe Doe</span>
  <span itemprop="company">The Example Company</span>
  <span itemprop="tel">604-555-1234</span>
  <a itemprop="email" href="mailto:joe.doe@example.com">joe.doe@example.co
m</a>
</div>
```

<p><b>Custom 404 Error Page Test</b></p>	<p>✘ Your website is not using a custom 404 error page. Default 404 error pages result in a poor experience - it can mislead users into thinking an entire site is down or broken, greatly increases the chance they leave your site entirely, and looks unprofessional. By creating a custom 404 error page, you can improve your website's user experience by letting users know that only a specific page is missing/broken (and not your entire site), providing them helpful links, the opportunity to report bugs, and potentially <a href="#">track the source of broken links in your site</a>.</p> <hr/> <p><b>HOW TO FIX</b></p> <p>Creating a custom 404 error page can be relatively simple or more complicated, depending on what technologies were used to build your website (your web server, framework used, etc). <a href="#">Learn more about the basics of creating a custom 404 error page</a>.</p> <p>On your custom error page, you should provide relevant information to keep the user's attention so they remain on your website. Some steps to achieve this goal include:</p> <ul style="list-style-type: none"> <li>• Adding links to your most important pages (your best articles/articles/content, latest posts, etc.)</li> <li>• If you have an e-commerce business, you can display special offers, product recommendations, discounts, etc.</li> <li>• Include a search box or a sitemap link to help users find the information they wanted.</li> <li>• Use simple language (non-technical) to explain what went wrong.</li> <li>• Add a contact form or provide an email address to allow users to get in touch with you for further help.</li> </ul> <p>You can also use your custom 404 error page to <a href="#">track the source of broken links in your site</a>.</p>
<p><b>Noindex Tag Test</b></p>	<p>✔ Your webpage does not use the noindex meta tag. This means that your webpage will be read and indexed by search engines.</p>
<p><b>Canonical Tag Test</b></p>	<p>✘ Your webpage is using the canonical link tag. This tag specifies that the URL: <a href="#">index.html</a> should be the preferred version of this page. The canonical tag can be useful when there are similar versions of the same content on several URLs (e.g., such as e-commerce sites where URL modifiers like sort parameters are appended to a product page's URL). Please ensure that this specification is correct, as canonical tags are often hard-coded and may not always reflect the latest changes in a site's URL structure.</p> <hr/> <p>→ <code>&lt;link href="index.html" rel="canonical"/&gt;</code></p> <hr/> <p><b>HOW TO FIX</b></p> <p>The Canonical Link Tag can be used when there are several pages with similar content and you want to tell the search engines which page you prefer to use in the search results. If your webpage does not have duplicate content and it has the preferred URL you must remove the canonical link tag.</p>
<p><b>Nofollow Tag Test</b></p>	<p>✘ Your webpage is using the nofollow meta tag. You are advised to use this tag carefully since search engines will not crawl all links from your webpage.</p> <hr/> <p>→ <code>&lt;a href="https://www.facebook.com/" rel="nofollow" target="_blank"&gt;&lt;/a&gt;</code>  → <code>&lt;a href="https://twitter.com/" rel="nofollow" target="_blank"&gt;&lt;/a&gt;</code></p> <hr/> <p><b>HOW TO FIX</b></p> <p>If you want search engines to crawl all the outgoing links on your webpage you must remove the nofollow meta tag.</p>

<b>Disallow Directive Test</b>	 Your robots.txt file does not use the disallow directive. This means that the whole website can be crawled by search engines.
<b>SPF Records Test</b>	 Congratulations! Your DNS server is using an SPF record. <hr/> <p>→ v=spf1 +a +mx +ip4:208.91.198.55 ~all</p>
